

ABSTRACT OF THE DISCLOSURE

A workstation having a work surface, a CPU cabinet, a file pedestal and an adjustable platform for a keyboard and mouse. The CPU cabinet shares a side wall with the workstation, and includes an inside side wall, a bottom wall, rear wall, also shared with the workstation, and a door. The interior space of the cabinet is for receiving the CPU and for causing it to be hidden. Wire and cable access are provided by a grommet covered opening in the rear wall and a recess in the inside side wall. Additional access to the CPU is achieved by opening the door.
